

Point distribution for Assignment 1

- Isomorphic Strings: 3 points
- Interleaving Strings: 3 points
- Longest Balanced Binary Subarray: 4 points
- Total: 10 points

Point distribution for Assignment 2

- 2 points for each method
- Total: 10 points

The rest applies for all assignments

1. Basic eligibility for credit

- The submitted file(s) must run.
- If a syntax or runtime error prevents the file from running, the assignment receives 0/10.

2. Correctness and partial credit

- Evaluate each exercise for correctness.
- Give partial credit when the program runs but produces incorrect results for some cases.
- Consider both functional correctness and overall code quality.

3. Code-quality criteria

Check for:

- Clear, meaningful names
- Limited repetition and duplicated code
- Appropriate decomposition into functions
- Readable and reasonably simple logic
- Correct indentation and formatting
- Useful comments that explain the logic rather than restating the code

These may support feedback, but deductions should follow the specified deduction rules.

4. General deductions

Apply each type of general deduction only once per assignment, even if the problem appears in multiple exercises or functions:

- Missing or inaccurate type annotations: -0.25
- Missing or incomplete docstrings: -0.25
- Required invalid inputs are not handled gracefully: -0.5

- Any use of an import statement: -0.5
- Any use of a set: -0.5
- Programmer's Pact violation: -0.25 per distinct Pact rule violated
- Use of an unpermitted advanced technique, such as recursion or dynamic programming: -1

For an advanced technique, notify the instructor before finalizing the grade.

5. Feedback requirements

For every submission:

- Leave a Sakai comment evaluating the work (with advice if necessary) and explaining every deduction and its reason.
- Additional suggestions may be included even when no points are deducted.
- Make the feedback clear enough for the student to understand how the final score was calculated.

6. Late submissions

- The assignment remains open for three days after the deadline.
- Each 24-hour late period uses one late pass.
- Each student has three late passes for the entire semester.
- Maintain a list of students who use late passes.

7. Grade-review workflow

- Do not release grades to students immediately.
- Complete the grading and then allow the instructor to review it.
- If grades were released prematurely, review all submissions again, correct the deductions, and leave the grades unreleased pending instructor review.

8. Grading recap

After completing the grading, send the instructor a brief recap containing:

- How the grading went
- Any questions or unusual cases
- The updated list of students who have used late passes
- Any submissions using advanced or prohibited techniques
